Quarries, Aggregates & Minerals

Gap Technology Ltd. has become synonymous throughout the mineral, aggregate and ceramics industries worldwide, being recognised for its incomparable screening solutions for high-volume separation and classification, with the ability to cope amongst abrasive materials and heavy-duty applications, statically and dynamically.

We provide a multitude of vibrating, tensioned and static screen decks and sieve bends to a diverse range of OEM's and end users.

Regular types and reasonable quantities are held on stock, produced in a variety of slot gaps and corresponding wire profiles to accommodate the urgent requirements of existing and new customers with a strong reputation for robust construction and precision screen engineering.
